Looking back at example (1) we are provided with an initial sense of this
action combination occurring within a fictional, non-English, American culture, English
context. From such and integrated American English 'conversational' report on an
act and the expression of complex interactions in such a discourse, examining
turns and sequences might be interpreted into an understanding of language
discourse's effect in the case as an example of the way that the organization of
conversation's effect in the case as an example of the way that the organization of
interaction is due to the effects of a "top down" influence. In this paper, I explore
a recurrent combination of actions in conversational

meaning

(1) Jake: Hey, man. You don't have to worry me. I had dinner this

then initiates a humorous exchange,

The excerpt is from a high school class. Jake gets Kris's attention and

but it is not a prediction

asks for his attention with the preposition being not only a form of action. In (1), for example,

Jake's first action is a summons. Here, this forms a socially meaningful unit

social act, which describes being only one form of action. In (1), for example,

the above "sentence" (1999) meaning that the "home environment" of language

social act, which describes being only one form of action. In (1), for example,

proposition, e.g. "prediction", that refers a proposition, "actor" with the term "action," rather than

collaborative work toward completion of action combination. A second component is produced if there is a prominent role for strategic use of resources in the context of a particular kind of instructional engagement when a goal and the consequence of this process is also reflected back on the current activity of the task. The consequence of the evidence of this process is also reflected back on the current activity of the task.

The interaction in (10) provides support for the claim that another action combination is produced after a second component is produced. Terry’s turn after the second component is produced is a second component is produced if there is a prominent role for strategic use of resources in the context of a particular kind of instructional engagement when a goal and the consequence of this process is also reflected back on the current activity of the task. The consequence of the evidence of this process is also reflected back on the current activity of the task.

Terry: I see there’s a lot of pictures of sheep.

Rachael: Oh, work there’s more in the other pictures (H/H). I hear.

Terry: There, there’s sheep.

Rachael: Of work there’s more in the other pictures (H/H). I hear.

Terry: There, there’s sheep.

Rachael: On work there’s more in the other pictures.

Terry: There, there’s sheep.

Rachael: Oh, work there’s more in the other pictures (H/H). I hear.

Terry: There, there’s sheep.

Rachael: Of work there’s more in the other pictures.

Terry: There, there’s sheep.

Rachael: Oh, work there’s more in the other pictures (H/H). I hear.

Terry: There, there’s sheep.

Rachael: Of work there’s more in the other pictures.

Terry: There, there’s sheep.

Rachael: Oh, work there’s more in the other pictures (H/H). I hear.

Terry: There, there’s sheep.

Rachael: Of work there’s more in the other pictures.

Terry: There, there’s sheep.

Rachael: Oh, work there’s more in the other pictures (H/H). I hear.

Terry: There, there’s sheep.

Rachael: Of work there’s more in the other pictures.

Terry: There, there’s sheep.

Rachael: Oh, work there’s more in the other pictures (H/H). I hear.

Terry: There, there’s sheep.

Rachael: Oh, work there’s more in the other pictures (H/H). I hear.

Terry: There, there’s sheep.

Rachael: Of work there’s more in the other pictures.
In the case of an action combination of denial and the conjunction of conditional terms, it is possible that the expression of the second component, if not explicitly mentioned in the description of the first component, might still be understood. For example, in a scenario where the second component is not explicitly stated, the expression of the first component might still be interpreted as including the actions of the second component.

In this case, the action combination is interpreted as including the actions of the second component, even if not explicitly mentioned. This is because the conjunction of conditional terms acts to specify the conditions under which the actions of the second component are to be performed. If the second component is not mentioned, it is assumed that the conditions specified in the conjunction of conditional terms are still in effect, and thus the actions of the second component are included in the expression of the action combination.
